QM
Vision

Simplify the creation and registration
of received quality alerts.

Technology is here to free up our time, not to occupy it.

An important aspect within the quality department of any corporation is the reception and classification of incidents, tasks that often require significant manual intervention.

This process can divert attention from what really matters: solving quality issues.

QM Vision simplifies this process, allowing the team to focus on what truly matters.

minsait.com

Automate, simplify, and focus on what truly matters.

Less registration time

Significant reduction in the time required to register and classify alerts in SAP.

One single access point

Centralization of the entire process in a simple and intuitive interface.
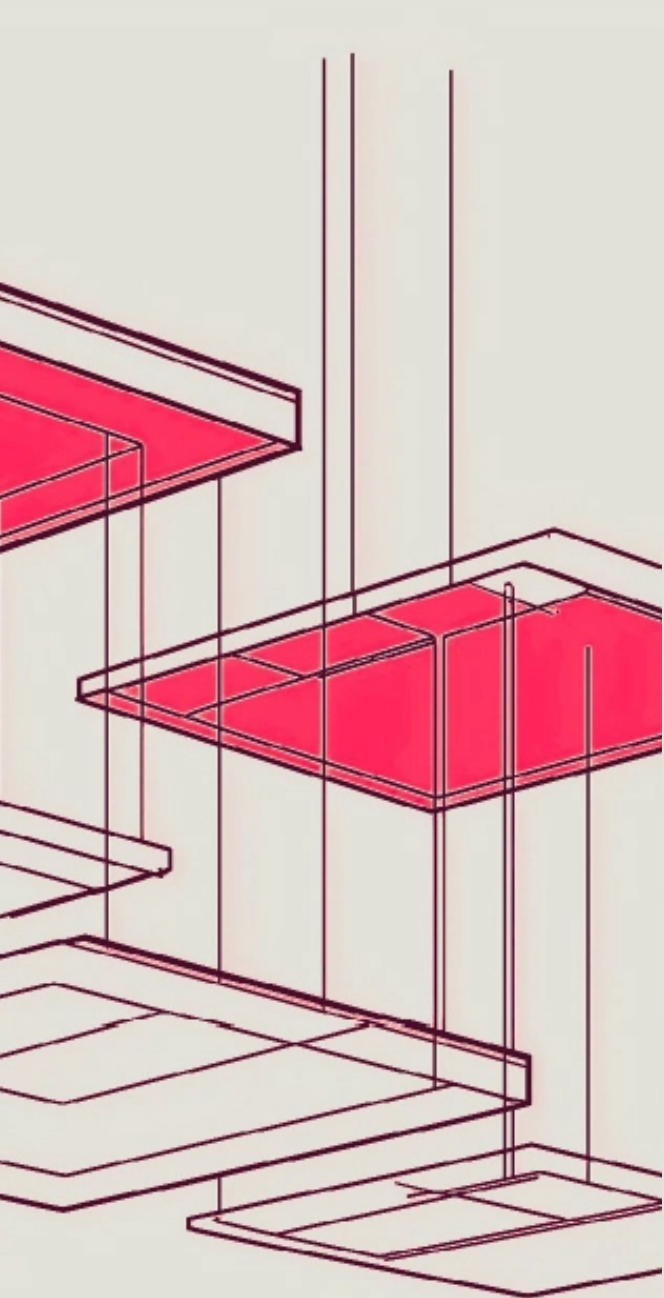

Minimize manual tasks

Thanks to automation, the system reduces manual workload.

Focus on what matters

AI-generated automatic summaries to prioritize the most relevant actions.

The detail that makes the difference in your quality processes.

01 Automatic reception and interpretation

o Processes information sent via text or images from emails or reports.

o Generates automatic summaries of the received data.

02 Automatic classification

Determines the type of quality alert based on the configuration in SAP QM and the information received in the alert or incident description.

03 Details of the causes and location

Identifies the causes and location of the incident based on the received data.

04 Creation of alerts in SAP

Completes the creation process in SAP directly from the interface, assisted by AI.

minsait.com

Simplifying the complex is the first step towards operational excellence.

50% Less time spent on manual tasks in incident management.

70% Faster classification and creation of quality alerts.

única Interface to manage the entire process, from reception to creation.

QM Vision has been developed by incorporating advanced Artificial Intelligence technologies to enhance traditional processes.

This solution not only improves quality workflows but also opens the door to future implementations in areas such as EHS (Safety and Environment).

Tech for
impact

We connect talent,
technology, and business
to drive growth and
create positive,
sustainable impact.
